

Namdhinggo - Font Features

Namdhinggo is a Unicode font for the Limbu writing system of Nepal. It includes a number of optional features that may be useful or required for particular uses. This document lists all the available features.

These OpenType features are specified using four-letter tags (e.g. 'ss18'). For more information on how to access OpenType features in specific environments and applications, see [Using Font Features](#).

This page uses web fonts (WOFF2) to demonstrate font features and should display correctly in all modern browsers. For a more concise example of how to use Namdhinggo as a web font see [Namdhinggo Webfont Example](#). For detailed information see [Using SIL Fonts on Web Pages](#).

If this document is not displaying correctly a PDF version is also provided in the documentation/pdf folder of the release package.
